Final Reflection:

The main idea that we proposed or the main idea of this whole project to work out during the whole semester was making a page like zillow but instead of just offering houses to sale, rent or buy, we also wanted our website to be able to offer houses that were in a bad state or needed remodulation for it to be a proper house to someone our idea in mind was also to connect people to this house so they didn't see them as trash or just old or obsolete we want our clients to see the potential of this houses and build up their houses of their dreams with our help, and also another thing that made our idea a good option in this type of market is offering our clients a more cheap way to get a house because nowadays doesn't matter in which part of the world you want to live in all the prices for a house for a home are way to high or too expensive and this can make people with not a lot of money zillow type website or our website obsolete but thank to this idea of remodel old houses or reforming damaged houses we can offer our clients a new way to get a house to get a home and this will benefit people with money but especially people with not a lot of money to even buy a house so that was another point about our project and website idea could stand out in this type of market in which we are trying to compete.

This idea or proposition is also good to the community because think of Guadalajara the city that we live in, the prices for buying a house or renting a house have gone up so high that is almost impossible to the majority of people in Guadalajara to get a house to get a place to live in, which in our opinion is something essential in people's life to get, so we figure it out that with our proposed idea we could people in the city in need of house and also contributing to the good of our community in which we live in.

Our website can be used easily in real life because we basically connect our clients and give them plenty of options and information about houses near them, they just need to put their city and their ZIP in which they live and that will give them a catalog of houses to buy, rent or sell as usual but also houses that aren't in good state or are old or damaged usually this houses will be sold in a much cheaper price than the once that are in good state or shape, if they select the option of the damaged house, we also offer services, this services basically are external companies or people that will help our clients that selected the old or damaged houses to make a plan of work and budget in order to reshaped the houses in the vision and tastes of the client in order to them to be the ones to build up from ground their houses of their dreams, this services mostly include companies or people that are carpenters, plumbers and painters in order to help our clients to build and reshaped their houses that they select, in the website we have a services page that gives our client the option to contact the services that I mentioned before in order to them to pay them directly and organize to when they will start the work and how they will be paid and what type of work they need to do in order to complete the house in the vision of the client.
